IT TESTER

Clear overview of course topics, training scope and key information.

Why complete an IT testing course? IT tester - manual, is in its essence the lowest level in the field of IT technologies. Therefore, this position is suitable for entering the world of IT. The tester position is very attractive and often sought after. This is mainly due to the great development of applications and IoT devices, which are increasing at a fast pace. All these applications need to be tested. In the labor market, demand for testers is much greater than the market itself offers. After the course, the graduate is able to perform work in the position of an IT tester. The course contains a lot of theory that is needed to understand the entire issue. The theory is supplemented with practical information and you will also try it through practical exercises in application testing.

COURSE CONTENT

01
